PRODUCT OVERVIEW

SiteBox Event

Portable entrance observation and anonymous movement analytics for events and commercial environments.

Engineering concept render. Physical configuration remains subject to validation.

Typical applications

Event entrances, exhibition venues, retail premises and controlled pedestrian access points.

Document revision: C224E2547DAB
Issued: 21 November 2026

ENGINEERING INFORMATION

Technical specifications

Specification	Proposed configuration
Installation	Portable or temporary entrance configuration
Camera system	Configurable entrance-facing IP cameras
Detection	Anonymous person detection and tracking
Counting	Proposed bidirectional IN and OUT counting
Virtual barriers	Configurable counting lines
Analytics	Entry, exit and estimated occupancy statistics
Power supply	External supply or battery configuration
Connectivity	Ethernet, Wi-Fi or optional mobile data
Privacy	No facial recognition
Accuracy	Subject to real-world counting validation

Key capabilities

Directional counting
Separate entry and exit observations using configurable virtual counting barriers.

Occupancy estimates
Aggregate movement statistics to support operational planning.

Privacy-conscious architecture
The design focuses on anonymous object tracking rather than personal identification.

This document describes an engineering configuration under development. Specifications, performance, component selection and availability remain subject to validation. No certification is implied.
