PRODUCT OVERVIEW

SiteBox Traffic

Roadside and entrance-based vehicle observation with proposed directional movement analytics.

Engineering concept render. Physical configuration remains subject to validation.

Typical applications

Vehicle entrances, logistics sites, private roads and authorised traffic observation.

Document revision: 8E3710525A51
Issued: 21 November 2026

ENGINEERING INFORMATION

Technical specifications

Specification	Proposed configuration
Installation	Fixed roadside or temporary observation mast
Camera system	Directional IP camera configuration
Detection	Vehicle detection and classification
Counting	Configurable directional counting barriers
Analytics	Aggregate movement and vehicle-class statistics
Connectivity	Ethernet or optional 4G
Power	External supply or autonomous power option
Sensors	Optional weather and equipment-status sensors
Identification	No automatic number plate recognition in the proposed baseline
Accuracy	Pending field testing

Key capabilities

Directional movement
Designed to distinguish vehicle movement across configured observation lines.

Vehicle classification
Proposed classification of supported vehicle categories.

Flexible observation zones
Camera mounting and counting zones depend on the road layout and operating conditions.

This document describes an engineering configuration under development. Specifications, performance, component selection and availability remain subject to validation. No certification is implied.
